# Project Documentation

Introduction

Welcome to the Travel & Tour project documentation. This project is built using React and it provides a clean simple interface throughout the components as we will see below.

This project has a full tutorial for anyone interested in developing it from scratch.

It has been planned, resource collected and developed in 4 days.

Travel & Tour App - 2023

Project Installation

Download the project ZIP file from **here.** **or** **here**

Step 1

Extract the project ZIP file (Password: isratech.1)

Step 2

Drag and drop the project folder into your code editor – we use Visual Studio Code.

Step 3

Open a New Terminal from the menu – if your using VSC.

Step 3

Type **npm start** – this is only applicable because the project the project is built with Vite.

Press **Enter Key** to start the development server, and you can access the project in your web browser.

<div style="background-color:#4050E0;color:white;padding:4px;">   **Components**</div>

Navbar Component:

> This component represents the navigation bar at the top of the web page.
>
> It includes:
>
> - Logo: Typically, this is website's logo or branding element.
> - Menu: A list of links or navigation options that allow users to browse different sections of the website.
> - Book Now Button: A button that users can click to initiate a booking process.

Search Field Component:

> This component appears to be a search feature that allows users to find destinations based on certain criteria.
>
> It includes:
>
> - Input Fields: Input fields for users to search for details such as the destination, date, and price range.

Destination Component:

> This component displays a list of destinations that users can choose from.
>
> It includes:
>
> - List of Destinations: Displaying the available destinations, possibly populated from an array.
> - Destination Details: Information about each destination, such as name, description, and an image.

Keep in Touch Component:

> This component provides a way for users to stay in touch with your website or business.

It includes:

- Email Address Input: A field where users can enter their email addresses.
- Send Button: A button to confirm or submit their email address for updates or newsletters.

Footer Component:

This component is typically located at the bottom of the web page.

It includes:

- Links: Links to important pages or sections of the website, such as "About Us," "Contact," "Privacy Policy," etc.

In summary, these components work together to provide users with a seamless and informative browsing experience on your website, especially if they are interested in booking travel-related services.

Styling

The project uses 'Poppins', sans-serif fonts for typography. The overall styling and layout are designed to provide a clean and user-friendly interface.

Fonts

- Poppins font is used for headings and titles.
- Sans-serif font is used in browser that Poppins might not be support (Rare case).

Deployment

The project can be deployed to various hosting platforms of your choice, such as Vercel, Netlify, or GitHub Pages. Refer to the deployment documentation of your chosen platform for specific instructions.

License Ownership

The project is provided with full ownership when downloaded from the official link mentioned in the project description. You are free to use, modify, and distribute it as per your requirements.

This documentation provides an overview of the Real Estate Admin Dashboard project. For more detailed information, please refer to the source code and comments within the project files.

Additional Services

In addition to making this project available, we offer a range of services to enhance your experience and meet your specific needs:

Customization

We understand that every business has unique requirements and branding. Our team of experienced developers can customize the project to align with your business's specific needs, including tailored features, color schemes, and branding elements.

Installation

Setting up a web application may not be everyone's expertise. We offer installation services to ensure that the project is correctly deployed on your preferred hosting platform. Our team will handle the technical aspects, so you can start using the dashboard without any hassle.

Personalization

Your success is our priority. We offer personalization services to fine-tune the dashboard according to your workflow and preferences. Whether it's custom reports, user roles, or integration with third-party tools, we can tailor the dashboard to meet your specific business requirements.

Please feel free to reach out to our support team for more information on these services or to request a quote. We are committed to helping you make the most of this project and ensuring it aligns perfectly with your business goals.
